Abstract

The title method comprises emulsifying a self-emulsifying alkenylsuccinic acid anhydride which is combined with an emulsifying agent with water using a static mixer which has right-twisting elements and left-twisting elements arranged so that the ends alternatively join and cross in the axial direction, and, after mixing an acrylamide polymer and/or a polymer realized by graft polymn. of reactive monomers on starches with the obtained sizing agent emulsion using the static mixer, adding to a pulp slurry.
